

Same institutional mood, three palette & type takes. Each frame shows the hero plus the signature sections – the misconception, the science/art reframe, the Practitioner curriculum, the certificate motif and the final CTA. Pick a direction and I'll build it out to the full 12-section scrolling page with subtle scroll reveals, a sticky CTA and the animated certificate.

THE PHILOSOPHY

Part science, part art. *The science, you can learn.*
The art comes with disciplined experience.

The science is teachable: how markets work, risk and position sizing, reading price, building a plan, managing yourself. The art — judgement, patience, temperament — develops as you apply the science honestly over time. Our job is to give you a rigorous foundation in the science and a real framework to develop the art.

- 01 Foundation**
Market structure, instruments, and how trading really works.
- 02 Core discipline**
Risk management and position sizing — the professional's first skill.
- 03 Technique**
Reading price and structure, on historical case studies.
- 04 Method**
Building and back-testing a rules-based plan you can defend.
- 05 Mastery & temperament**
Psychology, journaling and the practitioner's loop of continuous review.

Stop gambling on the market. Start learning it like a profession.

The next free masterclass begins [Sat 19 July · 7 PM IST]. Seats are limited to keep the cohort serious.

7-day no-questions-asked refund

Educational content only — not investment advice; no tips or signals. We do not guarantee returns; ~9 in 10 traders lose. Examples are illustrative and at least three months old. © 2026 AK School of Markets (placeholder).

A surgeon doesn't "feel lucky". An auditor doesn't "wing it". They earned the right to practise — and approaching a serious financial skill as a gamble is precisely why ~9 in 10 lose.

The science is teachable: how markets work, risk and position sizing, reading price, building a plan, managing yourself. The art — judgement, patience, temperament — develops as you apply the science honestly over time, the way a professional school would teach it, not the way a 60-second ad does.

I.	Foundations of the market	instruments · mechanics · why most losses are avoidable
II.	Risk management	positioning · position sizing · R-multiples · drawdown
III.	Reading price	price action · trend · structure · support / resistance
IV.	Building a trading plan	entry · exit · rules · entries · exits · back-testing
V.	Psychology & temperament	trading psychology · discipline as a professional habit

THE FOUNDER

“I came to the market from a different profession entirely. I teach it as a discipline — *because that's the only version that lasts.*”

[Founder Name]
Chartered Accountant (CA) · 12 yrs in markets
